

A METHOD AND SYSTEM FOR SERVER BASED SOFTWARE PRODUCT  
RELEASE VERSION TRACKING

ABSTRACT OF THE DISCLOSURE

- 5           A method for maintaining software product version tracking in a client/server computer system environment. The method includes the step of storing a plurality of software product versions within a database. A plurality of directories of the database are traversed to determine paths for each of the plurality of software product versions, the traversing performed by a server.
- 10   At least one of the software product versions is select for updating, the selecting performed by one of a plurality of clients. The one software product version is edited using the one client and a resulting new software product version is subsequently returned to the database. Using the server, the directories of the database are updated to chronologically track the new
- 15   software product version to ensure the paths for each of the plurality of software product versions and the new software product version are available to the plurality of clients.
